

# Object Oriented Analysis & Design

## 面向对象分析与设计

---

### Lecture\_07 通用的职责分配软件原则 GRASP

主讲: 姜宁康 博士

## ■ 2、GRASP原则二：信息专家 Information Expert

- What is a general principle of assigning responsibility to objects? 为一个对象分配职责的一般原则是什么?
- “鸡鸣狗盗”  
战国时候，齐国的孟尝君喜欢招纳各种人做门客，号称宾客三千....

## 2.1 Mini Exercise 2

- **Given a key, which object can tell me about**

- **...Square in Monopoly**

- **...Total money of a sale in POS**

- **Note:**

- **this is a knowing responsibility**

## 2.2 GRASP rule2: Information Expert

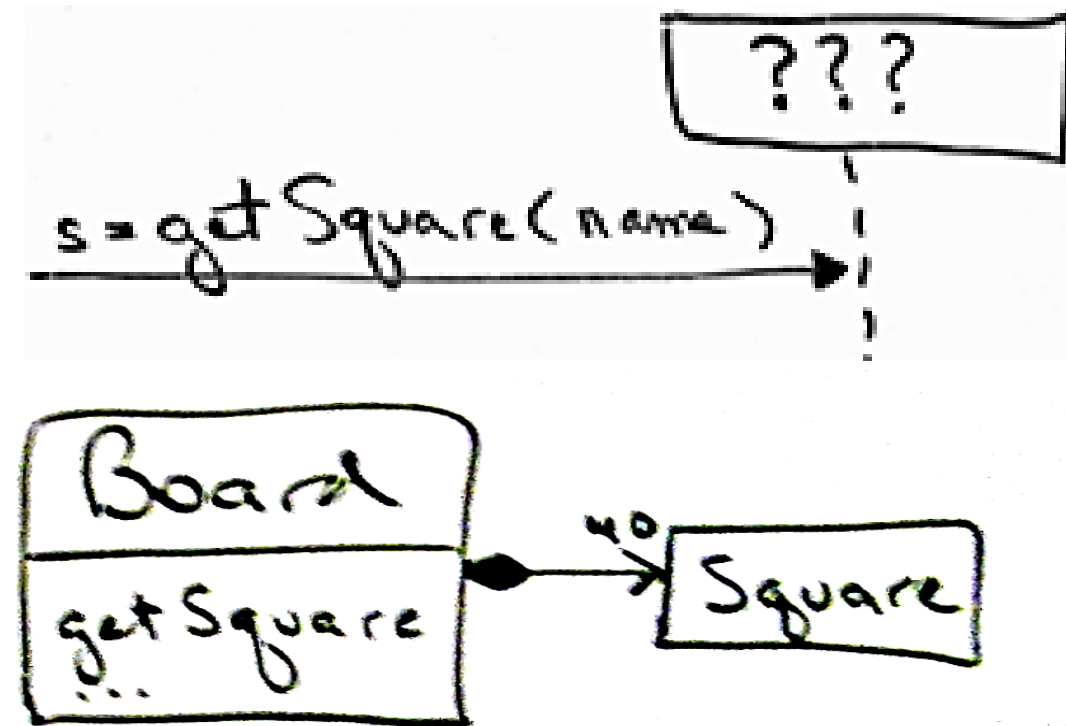

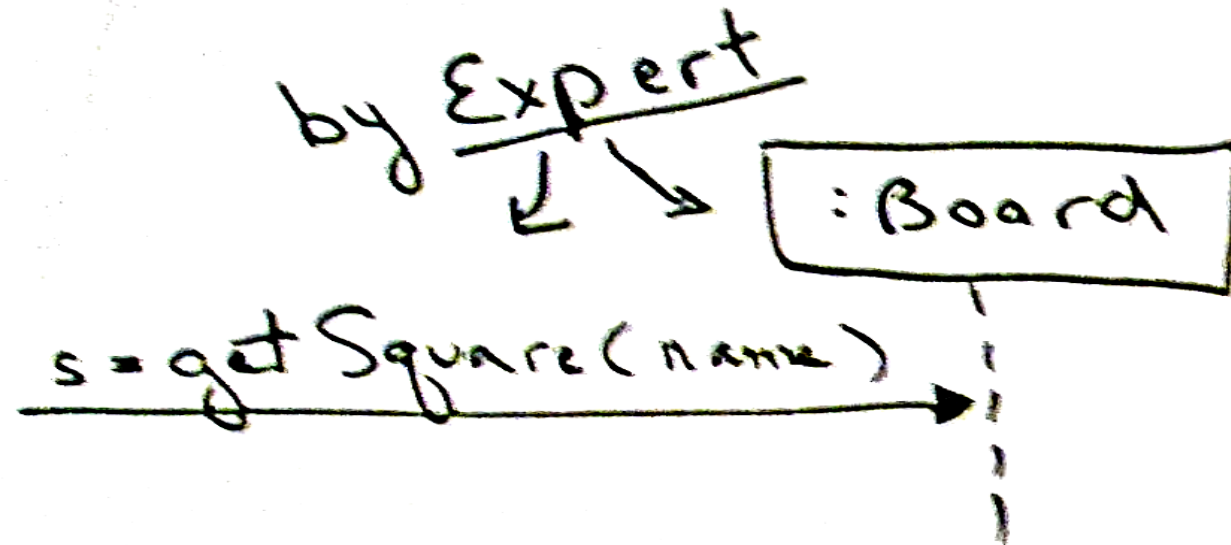

- **Name: Information Expert (信息专家)**
- **Problem:**
  - What is a general principle of assigning responsibility to objects?
- **Solution:**
  - Assign responsibility to the class that has the information necessary to fulfill responsibility

## 2.2 GRASP rule2: Information Expert

### ■ Information

- an object's own state,
- about other objects, the world around an object,
- information the object can derive,
- and so forth

### ■ Answer to Mini exercise 2

## 2.3 Information Expert — How to?

### ■ 步骤

- 1) Clearly state the responsibility
- 2) Look in Design Model for relevant classes
- 3) Else look in Domain Model and create design classes

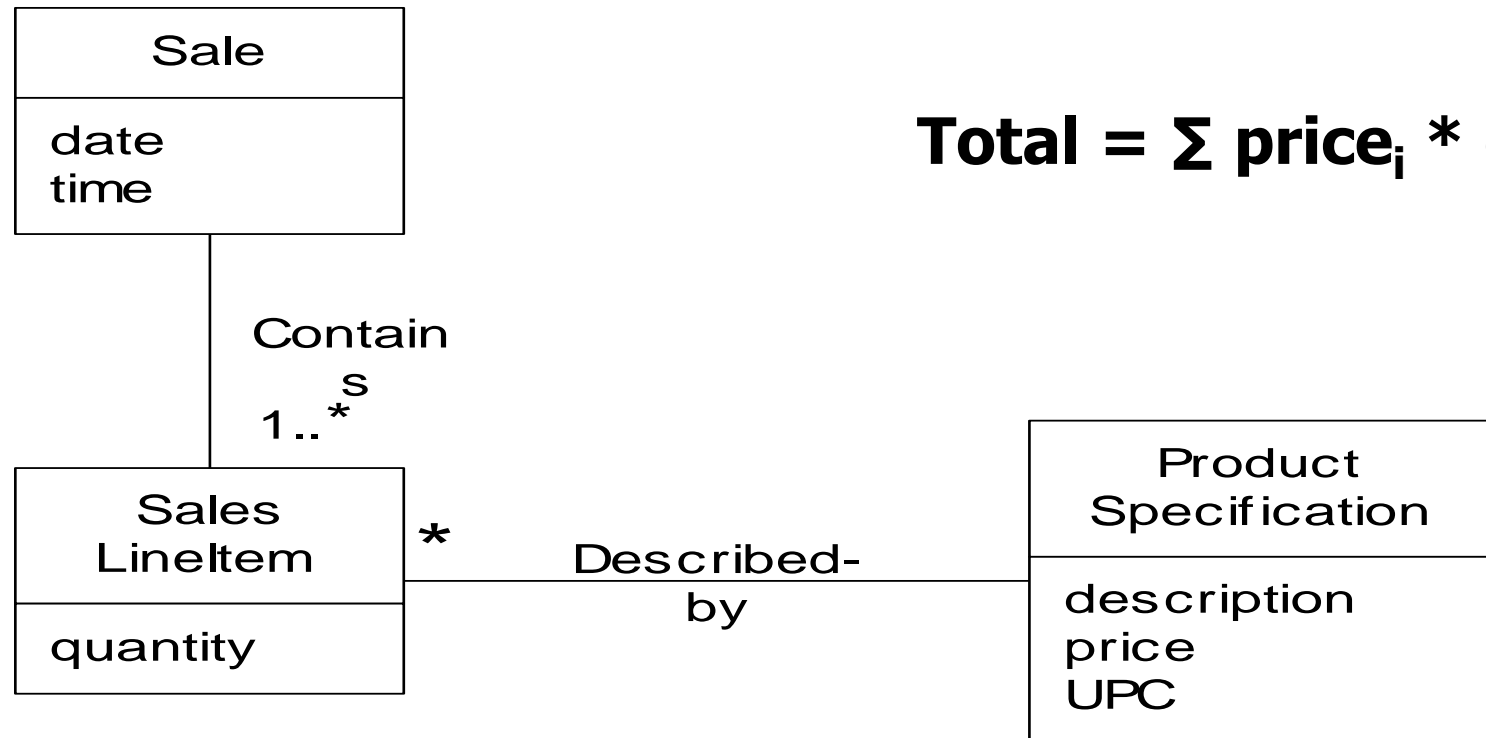

### ■ 信息专家的优点

- 封装性 Encapsulation
  - 对象充分利用自身的信息 objects support their own information
  - 支持低耦合 supports low coupling
- 系统行为分布到不同的类 Behavior is distributed across classes
  - 支持高内聚 supports high cohesion

## 2.4 Example— Sale Total

- Who should know the grand total (总计) of a sale?

Tell me the total money?

$$\text{Total} = \sum \text{price}_i * \text{qty}_i$$

- Product Specification has information about Price so it is expert for that (getPrice method)
- SalesLineItems has information about ProductSpec and Quantity so it is expert for SubTotal (getSubTotal method)
- Sale has information SalesLineItems with associated PriceTotal so it is expert for SaleTotal (getTotal method)

## 2.4 Example— Sale Total

t = getTotal

: Sale

1 \*: st = getSubtotal

lineItems[ i ] :  
SalesLineItem

1.1: p := getPrice()

:Product  
Description

New method

Sale

time  
...

getTotal()

A New  
method

SalesLineItem

quantity

getSubtotal()

A New  
method

Product  
Description

description  
price  
itemID

getPrice()

Calculating the Sale total

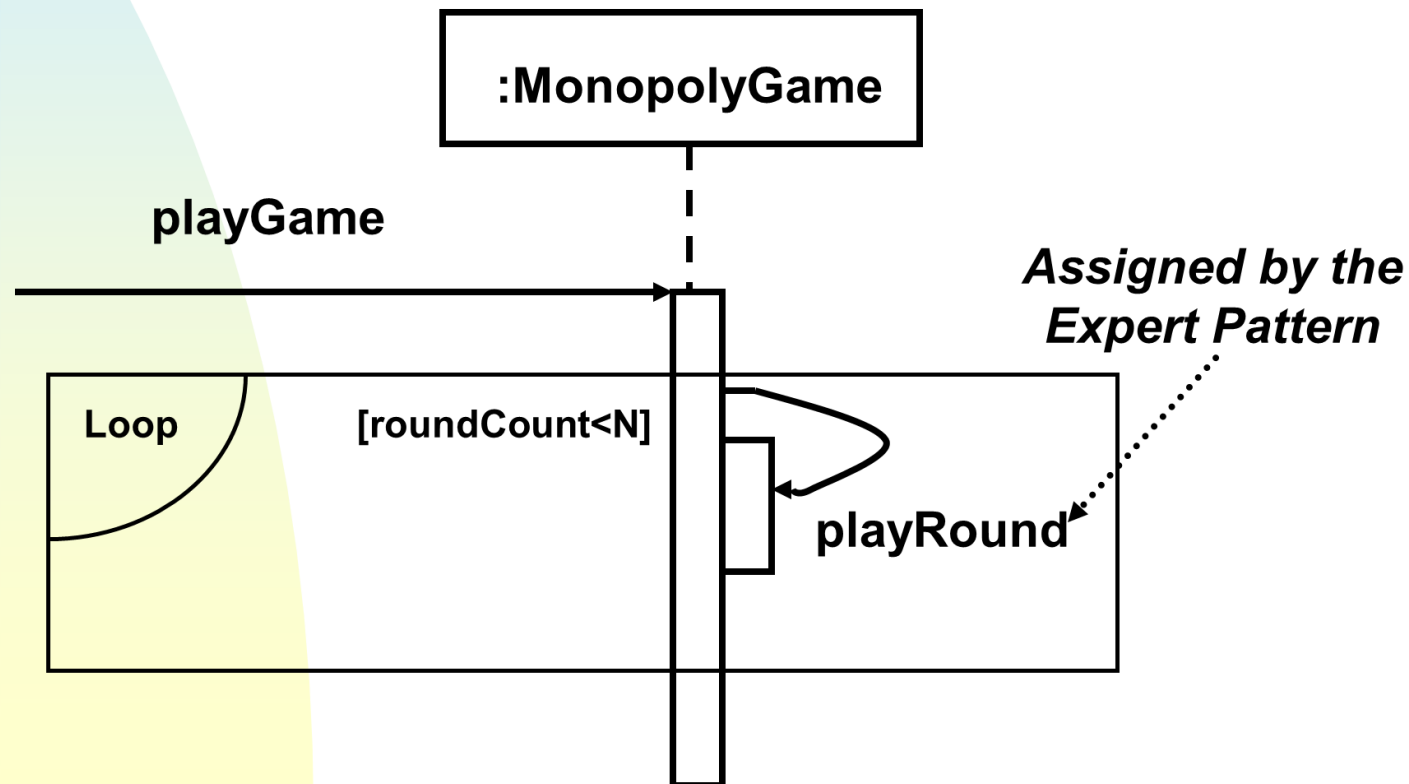

## 2.4 Example — Sale Total

Hence responsibilities assign to the 3 classes

Class	Responsibility
Sale	knows sale total
SalesLineItem	knows line item subtotal
ProductSpecification	knows product price

## 2.5 Example—How to control game loop?

- **Monopoly is played as a series of rounds in which each player takes a turn**
  - **What object should control the game loop to manage the rounds?**
- **By the Expert Pattern, the playRound object can be managed by the MonopolyGame**

■ **本讲结束**
